

What is claimed is:

1. A case for a press-through package with at least one blister with one or more pills therein comprising;

a first sheet member having at least one accommodation hole for

accommodation of said at least one blister;

a second sheet member having at least one take-out hole located corresponding

to said at least one accommodation hole of said first sheet member, in

which said press-through package is placed between said first and second

sheet members so that said one or more pills is taken out from said at

least one blister through said at least one take-out hole;

a blocking sheet member disposed between said press-through package and

said second sheet member in such a manner as to be slidable along said

press-through package and said second sheet member between an opening

position at which said at least one take-out hole is exposed to the outside,

and a closing position at which said at least one take-out hole is closed by

said blocking sheet member; and

said first and second sheet members respectively having elongated holes

located corresponding to each other so as to make said blocking sheet

member to the outside through said elongated holes.

2. The case for a press-through package according to claim 1, wherein:

the distance between an outer periphery of an accommodation-hole forming

section with said at least one accommodation hole therein and a first end

of said first sheet member is set to be wide;

the distance between an outer periphery of a take-out hole forming section

with said at least one take-out hole therein and a first end of said second

sheet member is set to be wide;
said elongated hole of said first sheet member is located closer to said outer periphery of said accommodation-hole forming section than to said first end of said first sheet member; and
said elongated hole of said second sheet member is located closer to said outer periphery of said take-out hole forming section than to said first end of said second sheet member.

3. The case for a press-through package according to claim 1, wherein a cover is detachably attached to any one of said first and second sheet members so as to partially or entirely cover a corresponding one of said elongated holes.

4. The case for a press-through package according to claim 1, wherein covers are detachably attached respectively to said first and second sheet members so as to partially or entirely cover said elongated holes.

5. The case for a press-through package according to claim 1, wherein at least one of said first and second sheet members has a cut-away portion, through which an end of said blocking sheet member in the sliding direction thereof is exposed to the outside, when said blocking sheet member is slid to said opening position.

6. The case for a press-through package according to claim 1, wherein said blocking sheet member has a corrugated section with ridges and troughs extending in a direction substantially crossing a direction in which said blocking sheet member is slid between said opening position and said closing position, said corrugated section being located so as to be exposed to the outside through said

elongated holes of said first and second sheet members.
